

Assignment 4: Validation & Testing Report

Multi-Agent Systems Engineering (1-3520104-20)
Due Date: 01/07/2026 | Weight: 10% of Final Grade

1. Objective

Prove that the engineered agent strategies achieve their goals through rigorous simulation and data analysis.

2. Required Structure

- Test Environment Setup: Parameters used in the simulation.
- Strategic Comparison: Baseline performance vs. advanced agent strategy.
- Data Visualization: Charts and graphs showing Utility and Social Welfare metrics.
- Stress Testing: System performance under extreme conditions (e.g., high agent density).
- Discussion of Results: Why did the agents behave the way they did?
